

COSMO® Signal

Quick Start Guide

A LOT Systems hardware computer · Version 1.0 · 2026-09-07

What it is

COSMO® Signal is a two-piece stainless steel desk device with a screen, a camera, and one button. It shows a single AI-chosen line from lot-systems.com the moment it matters — for example, “Coffee time!” — and lets you send a one-press acknowledgment back into your Log tab.

In the box

- COSMO® Signal unit
- Qi wireless charging puck (USB-C cable included)
- Quick start card

Setup

- 1 Place COSMO® Signal on the charging puck to power it on.
- 2 Hold the button for 5 seconds until a QR code appears on screen.
- 3 On your phone or computer, go to lot-systems.com/pair and scan or enter the code shown.
- 4 Once paired, the screen goes blank until your first message arrives.

Using it

- The screen shows one short line only when the moment is right — no constant notifications.
- Press the button (labeled COPY) any time to send what’s currently on screen into your Log tab at lot-systems.com. The screen shows a checkmark to confirm.
- The device lights the screen for 20 seconds per message, then goes dark again.

Charging

Place the device screen-up on the included puck; charging is wireless. A full charge lasts approximately 4–5 days of normal use.

Privacy note

The onboard camera is used only to detect whether someone is present at the desk and to read the pairing QR code during setup. It never records, stores, or transmits images.

Care

Two-tone stainless steel body: the front (screen side) has a satin finish; the back is mirror-polished. Wipe with a soft cloth. Not submersible (splash-resistant only).

Specifications

Display	1.3" IPS, 240 x 240
Connectivity	Wi-Fi 2.4GHz, Bluetooth (setup only)
Sensors	Environmental (temperature / humidity / pressure / air quality) + motion
Battery	300mAh, wireless recharge
Dimensions	40mm x 40mm x 12mm
Weight	< 95g
