v40 CORE PHILOSOPHY — THE SOURCE CODE

Every entry is a **commit** — It goes into the permanent record, immutable, timestamped, yours.

Every check-in is a **deploy** — You shipped yourself to production. That counts.

Debugging is not **failure** — It is the most honest part of the engineering process.

Refactoring is **courage** — Making something cleaner when it already works is hard.

Syntax of **emotion** — Clear expression is valid structure. Well-formed is a compliment.

Version control as **self-compassion** — Every version of you was the correct build at that time.
