

COSMO® Cube

Quick Start Guide — v1.1 — LOT Systems, Inc.

What it is

The COSMO® Cube is a 40×40×5mm stainless steel companion device, physically connected to your LOT account at lot-systems.com. It shows autonomous notifications from the LOT AI (like “Coffee time!”), reads the weather around you, and logs a moment to your Log tab whenever you press the single Copy button.

In the box

Item	Notes
1× COSMO® Cube	Mirror-polished back, satin front
1× Qi wireless charging pad	USB-C cable included
1× Quick Start card	This guide, condensed
1× QR pairing code card	Links to your LOT account

1. Pair your Cube

Open lot-systems.com → My Devices → Add Device. LOT generates a pairing code. Scan the QR code shown on your Cube’s screen (or enter the code via the companion app). Your Cube links to your account and starts polling for notifications.

2. Charge it

Place the LOT® charging pad on your desk and connect it via USB-C. Set the Cube face-up (mirror side up) centered on the pad. The LED breathes white while charging and turns solid green at 100%. There is no port on the device — charging is wireless only, by design.

3. Read your notifications

The LOT AI sends short messages to your Cube’s screen — things like “Coffee time!”, “Meeting in 10 minutes”, or “2-minute breathing exercise.” A message displays for up to 30 seconds, then the screen returns to the clock. Wave your hand over the Cube to dismiss a message early.

4. Press Copy to log a moment

Press the single button on the front face. The Cube captures the temperature, humidity, pressure, and light around you at that instant and sends it to your LOT Log tab, tagged **[COSMO® Cube]**. The LED pulses green on success. That is the entire interaction — one button, one deliberate gesture, one entry.

Care

IP54 splash resistant — not for submersion. Operating range 0°C to +45°C. Clean the mirror face with a soft cloth only; abrasives will mar the #8 polish.
