

LOT Computer

User Manual · v0.1 (planning draft) · 2026.09.09

What It Is

LOT Computer is a small stainless steel object that shows you one line at a time — a notification generated by your LOT Memory Engine and Quantum Operating System — and lets you log a moment back to your Log tab with a single button. It is not a screen you check. It is an object that tells you when to look.

In the Box

- 1× LOT Computer (40mm × 40mm stainless tile)
- 1× Wireless charging dock
- This manual (Quick Start card also included, printed)

Setup

1. Place LOT Computer on the charging dock. The display will show **Pair me**.
2. Open lot-systems.com on your phone or computer, sign in, and go to **Settings** → **Devices** → **Add Device**.
3. Enter the device ID printed on the back of your unit, or scan its code.
4. A 6-digit code appears on the LOT Computer's display. Enter it on the web page. Pairing completes in a few seconds.
5. Leave it on the dock overnight the first time to reach a full charge.

Daily Use

The screen: shows one short message at a time — “Coffee time.”, a mode change from your Quantum Operating System, or a pattern the Memory Engine noticed. It refreshes on its own; you never need to press anything to see the next one.

The button (“Copy”): press it whenever a moment is worth logging — the display briefly shows “Logged.” and the moment appears in your Log tab on lot-systems.com, timestamped to the second you pressed it.

Charging: set it back on its dock when convenient. Wireless only — there is no port on the device to align or wear out.

Care — Stainless Steel Body

- The mirror face (front) shows fingerprints by design — it's polished stainless, the same material as a watch case. Wipe with a soft microfiber cloth; avoid abrasive cleaners, which will dull the mirror finish permanently.

- The back face is bead-blasted and hides fingerprints better — it can be wiped the same way.
- The device is splash-resistant (sealed gasket at the shell seam) but is not designed for submersion.
- Do not attempt to open the two-part shell — there are no user-serviceable parts inside, and reopening it breaks the factory seal.

Privacy

- LOT Computer's weather sensor reads ambient temperature, humidity, and pressure from the room it sits in — nothing else. This feeds the same weather-mood insight system already used by the LOT web app.
- Camera capability, on units equipped with it, is off by default and must be explicitly enabled in Settings before the device will ever send an image anywhere.
- A Copy-button press sends only a timestamp — never audio, never a photo, never your location.
- You can unpair the device at any time from **Settings** → **Devices**. An unpaired device shows “Pair me” and stores nothing further until paired again.

Specifications

Dimensions	40mm × 40mm × 5–10mm (see note below)
Weight	≈ 35–45g
Body	316L stainless steel, two-part shell
Display	Reflective monochrome, daylight readable
Connectivity	Wi-Fi 802.11 b/g/n, Bluetooth LE (pairing only)
Charging	Wireless (Qi), included dock
Battery life	36–48 hours between charges (design target)
Sensors	Temperature, humidity, pressure
Input	1 button (“Copy”)

Note: early production units may ship at 8–10mm to accommodate an integrated camera; a camera-free 5mm version may follow as a separate model. Check the label on your unit's box for your specific configuration.

Troubleshooting

Symptom	Try this
Display stuck on “Pair me”	Confirm Wi-Fi credentials were entered correctly during setup; re-pair from Settings → Device
No new messages appearing	Check your account's Quantum Operating System mode isn't set to maintenance (lower mes
Copy button doesn't flash “Logged.”	Check the dock — a low battery can delay the confirmation flash; charge and retry
Device feels warm during charging	Normal for wireless charging; stop use and contact support if it feels hot to the touch
