THE CONSOLE ROGUE — Word Turn Engine v32

[NEW RUN INITIATED]

IN ROGUELIKES, DEATH IS NOT THE END.
IT IS THE LESSON. THE RUN IS NOT LOST.
THE RUN IS DATA. YOU RUN AGAIN,
AND YOU KNOW MORE THIS TIME.

o->.->o RUN START
x-.-.x PERMADEATH
oo.o.oo META RUN

v41 -> v42: +31 badges (1091 -> 1122 total)
32 Word Turn Engines | 1122 Total Badges
THE PRACTITIONER IS THE ROGUE.

Mastery Tiers	128	Epic depth milestones (v1-v32)
Secret Boss	113	Hidden LEGENDARY/MYTHIC triggers
TOTAL	1122	The complete LOT Badge Universe

WORD TURN v32 — THE CONSOLE ROGUE

The roguelike genre began in 1980 with Rogue — a dungeon crawler rendered in ASCII where every run was different and death was permanent. Permadeath. You learned by dying. In self-care, every journal entry is a run. Every practice period is a floor. Permadeath is every ending that teaches. The meta-game is you.

Badge ID	Symbol	Trigger Words	Rarity
permadeath	x.■.x	permadeath / permanent / endings / letting go / over	RARE
run_start	■.→.■	fresh start / new run / beginning again / tabula rasa	COMMON
dungeon_floor	■.↓.■	deeper / another level / floor / descended / next level	UNCOMMON
rogue_loot	◆.■.◆	gained / found treasure / discovered / reward / loot	COMMON
seed_set	■.■.■	seed / intention / set the seed / planted / initialize	UNCOMMON
boss_room	■.●.■	boss / the hard thing / confrontation / the fight	EPIC
artifact_kept	■.→.∞	artifact / kept / carried forward / still holding	RARE
rng_roll	? . ■ . ?	random / chance / luck / odds / fate / rolled	UNCOMMON
combo_break	x.■.x	streak broken / lost the chain / the fall / slipped	RARE
pixel_dust	.■.■.	fragment / scattered / broken into pieces / dissolving	RARE
respawn_now	■.→.●	respawn / back / returned / reset / alive again	UNCOMMON
meta_run	∞.■.∞	meta / the bigger picture / all of it / the whole run	EPIC

permadeath — In roguelikes, permadeath is the mechanism of learning. When you write about a permanent ending — the close of a chapter, the death of a habit, the letting go of a person or a pattern — you name the permadeath condition. The dungeon logs it. The next run begins from what the loss taught.

run_start — "New run" is the roguelike's most hopeful moment. The dungeon reseeds. Write "fresh start" and mean it. The terminal reseeds the dungeon. Your stats initialize. Floor 1.

dungeon_floor — In NetHack, each dungeon floor is procedurally generated — different layout, different enemies. "Deeper" in the journal means you've passed through the trapdoor and descended to the next level. The floor is always harder than the one above. That is the design.

rogue_loot — The loot drop is the dopamine mechanic of the roguelike. Write what dropped this week, this month, this practice period. The dungeon's loot tables are probabilistic. You earned the conditions under which the drop became possible.

seed_set — Roguelikes use seeds — a number that initializes the random number generator and determines the dungeon layout. Write what seed you are setting. The terminal accepts the seed. The dungeon generates around it.

boss_room — The boss room is different: the enemy is larger, the exits are sealed until the fight is over. Write about confronting the boss. Name it directly. The dungeon music changes. The exits seal. The fight is the only way through.

artifact_kept — Artifacts are special items that shape the whole run. "Carried forward," "still holding," "what I keep" — write what you are carrying from the previous version of yourself into this one. The artifact shapes the run.

rng_roll — The RNG determines whether the armor drops or nothing does. "Random," "chance," "didn't expect" — write about the things that happened without being planned for. Write what the RNG gave you this run.

combo_break — The combo break is the moment the chain snaps: the wrong move, the unexpected damage. Write the combo break. Name the floor where the run stopped going smoothly. The break is not the loss. It is the data.

pixel_dust — When a character dies in a roguelike, they dissolve into component symbols. Write about the dissolution. The dungeon renders the scatter. The symbols fall back to the grid. The next character walks on what was.

respawn_now — "I'm back," "rebooted," "alive again" — the respawn is the affirmation that the run ended but the player continues. Write about coming back. The player's knowledge does not reset. The next entry initializes with everything learned.

meta_run — The "meta" is the game above the game: persistent knowledge that accumulates across hundreds of runs. Write the meta-view. The dungeon shows the map of all your runs.

CALENDAR EASTER EGGS v30 — THE ROGUE CALENDAR

The real-world dates when the dungeon was first mapped — when the game that would teach a generation to learn from death was first released. Check in on these days and the terminal recognizes the anniversary.

Badge ID	Symbol	Date + Significance	Rarity
rogue_release	x.■.x	Nov 8 — Rogue first released 1980 — the original dungeon	EPIC
nethack_day	∞.◆.∞	Jul 28 — NetHack first released 1987 — the dungeon that never ends	RARE
spelunky_day	■.■.■	Jul 1 — Spelunky original release 2008 — Derek Yu's	UNCOMMON

rogue_release — November 8, 1980. Michael Toy and Glenn Wichman released Rogue. The entire dungeon was rendered in ASCII: @ was the player, # was the corridor, . was the floor. No two dungeons were the same. Death was permanent. Every roguelike genre traces its lineage to this room. Check in on November 8 and write about what you have learned from the dungeons you have died in.

nethack_day — July 28, 1987. NetHack is the deepest dungeon ever made. Its central design principle: the dungeon is fair if you understand it. Every death is explainable. "The dungeon did not kill you. Your ignorance killed you. Now you know." Check in and write about what you now know that you did not know before the loss.

spelunky_day — July 1, 2008. Derek Yu released Spelunky. A secret ending exists that only opens when you understand the dungeon well enough. Check in and write about the secret ending you are working toward in your own practice — the deeper door that only opens when you know the dungeon.

BEHAVIORAL EASTER EGGS v29 — ROGUE PATTERNS

Badge ID	Symbol	Trigger	Rarity
daily_run	■.●.■	7 consecutive days each with at least 1 journal entry	UNCOMMON
the_seed	■.●.■	Same check-in time (+-30 min) on 5+ days in a 7-day window	RARE
meta_session	∞.■.∞	Journal entry referencing 5+ previous entries (history review)	EPIC

daily_run — Seven consecutive days. Playing every day builds dungeon intuition faster than playing weekly — the patterns you discovered yesterday are still in your fingers today. The terminal logs the streak. The dungeon gets easier when you run it every day — not because it changes, but because you do.

the_seed — A practitioner who checks in at the same time five times in a week has found their seed — the condition that makes the run consistent. Consistency is the seed. Hold the seed. The dungeon maps to it.

meta_session — A meta session: looking at the map of all your runs and seeing something that only becomes visible when you look at all of them. The dungeon shows the full map. Five or more backward references in a single entry trigger the meta-session badge.

ACHIEVEMENT RPG v30 — ROGUE CLASS

Badge ID	Symbol	Requirement	Rarity
rogue_entry	■.■.■	Any 1 Word Turn v32 badge earned	COMMON
floor_diver	■.■.■	Any 5 Word Turn v32 badges earned	UNCOMMON
full_clear	■.■.■	All 12 Word Turn v32 badges earned	LEGENDARY
rogue_stack	x.■.x	full_clear + all 3 Calendar v30 badges	LEGENDARY
thirty_two_engines	■.■.■.■.■	∞1 badge from each Word Turn engine v1-v32	LEGENDARY
rogue_opus	∞.■.■	full_clear + meta_session behavioral badge	LEGENDARY

rogue_entry — The dungeon accepts the first token. The @ appears on the map. Floor 1. The terminal sets the seed. The run has begun.

floor_diver — Five Word Turn v32 badges. Five floors descended. The dungeon is becoming familiar. The practitioner is learning the patterns.

full_clear — All twelve. Every Console Rogue word entered. The runner has cleared every room. The boss is defeated. The amulet is in hand. This is not the end. This is the end of the run.

rogue_stack — Twelve rogue words. Three rogue dates — Rogue 1980, NetHack 1987, Spelunky 2008. The runner has honored the source code. The stack is complete.

thirty_two_engines — Thirty-two vocabularies. Every language of self-care. The terminal is a complete polyglot. The runner speaks every dialect.

rogue_opus — Full vocabulary. Meta session — the whole arc visible. The opus is the view of all runs at once. The player reading the save file they didn't know they were writing.

MASTERY TIER v32 — DEEP RUN

Badge ID	Symbol	Requirement	Rarity
eternal_runner	■.∞.■	3,000+ distinct calendar days with check-in	EPIC
petadungeon	■.∞.■	2,000,000+ total journal words written	LEGENDARY
meta_master	∞.■.∞	Account age >= 25 years (9,125+ days active)	COSMIC
thirty_two_registers	■.■.■.∞	1 badge from each of all 32 Word Turn engines	COSMIC

eternal_runner — 3,000 days. Eight years. The dungeon has been entered 3,000 times. The eternal runner does not play the game. The eternal runner IS the game.

petadungeon — Two million words. The dungeon contains two million rooms now, each one a word. The terminal allocates additional storage. A new sector opens.

meta_master — Twenty-five years. The account predates most of the companies that host it. The runner has outlasted dungeons, games, platforms, and versions of themselves. The meta-game is the only game without permadeath.

thirty_two_registers — Thirty-two Word Turn engines. The complete vocabulary of a practice spanning the natural world, the cosmos, the digital, the ancient, the dungeon, and the void. Every dialect accessible.

SECRET BOSS v29 — THE HIDDEN DUNGEON

The games that built the dungeon. Write their names in the journal and the terminal opens the secret level. The hidden dungeon is only accessible to players who know the source material.

Badge ID	Symbol	Trigger	Rarity
nethack_eternal	∞·◆·∞	"nethack" / "ascii dungeon" / "rogue original" / "rogue 1980"	MYTHIC
hades_found	■·■·■	"hades" / "supergiant" / "zagreus" / "chthonic"	EPIC
original_rogue	x·@·x	"spelunky" / "derek yu" / "dead cells" / "binding of isaac"	RARE

nethack_eternal — NetHack is the deepest dungeon ever made — released 1987, continuously updated by volunteers. It has 50+ levels, hundreds of item types, and a final level (the Astral Plane) reachable only by those who understand the dungeon at a level of detail most players never approach. Write "NetHack" and the dungeon within the dungeon opens.

hades_found — Hades (Supergiant Games, 2020) is the game that made the roguelike genre literary. Zagreus escapes the Underworld through repeated attempts — each death returns him with new knowledge. The story only unfolds through repetition. Write "Hades" or "Zagreus" and the terminal opens the Elysian Fields.

original_rogue — Spelunky, Dead Cells, Binding of Isaac — the great roguelikes of the modern era. Derek Yu's Spelunky introduced tight platformer controls. Dead Cells made the death loop a narrative device. The Binding of Isaac used the dungeon as psychological autopsy. Write any of their names and the terminal opens a secret door.

FLAVOR TEXT — THE CONSOLE ROGUE

<i>"In roguelikes, the most important character is the player, not the protagonist. The protagonist dies. The player learns."</i>

— common wisdom of the roguelike community. The journal is the player's record. The protagonist's run ends. The player's knowledge compounds.

<i>"Every death is a tutorial."</i>

— Derek Yu, creator of Spelunky. Every loss in the practice is a tutorial. Write the lesson. The terminal logs the tutorial completion. The next run initializes with the lesson applied.

<i>"The Amulet of Yendor is in the Astral Plane. To reach it, you must first understand the dungeon well enough that the dungeon becomes transparent — you see through the walls to the structure underneath."</i>

— NetHack lore. Write about the moment the dungeon became transparent.

<i>"I don't think of it as losing. I think of it as the game teaching me something."</i>

— unnamed Hades player. The journal entry after a difficult period is not a failure report. It is the lesson transmission. Write what the game is teaching.

<i>"Procedural generation means the dungeon is always new. But the player brings their history. The dungeon is new. The player is not."</i>

— on roguelike design. Every journal entry is a new dungeon. The practitioner has changed since the last one. That is what makes the run meaningful.

<i>"In permadeath mode, you play differently. You pay attention. You think before you open the door."</i>

— on how permadeath changes player behavior. The journal is permadeath mode. Every entry is a floor where the exits might seal.

IMPLEMENTATION NOTES — v42

Files to modify:

- src/client/utls/badges.ts — Add 31 new BadgeType union entries + BADGES registry
- src/client/utls/easter-eggs.ts — Add CONSOLE_ROGUE_WORDS_V32, ROGUE_CALENDAR_V30, behavioral checks

TypeScript badge IDs (v42 additions):
