LOT Pager — Hardware Program (HW-0)

Owner: Vadik, Inventor, COSMO® CIA · Program start: 2026-11-02 · This consolidation: S3, 2026-11-11

A 40 × 40 mm stainless-steel pocket computer. It shows autonomous notices from lot-systems.com ("Coffee time!") on a small screen. One button, "Copy", sends the notice back to the site's **Log** tab.

DOCUMENT SET (EACH ONE STANDS ALONE; PDFS IN `PDF/`)

#	Document	What it is	Status
01	Plan & roadmap	Product, 19-point trace, mechanics, schedule, budget	v0.3
02	BOM · Buying list	Parts, prices (estimates), where to buy	v0.3
03	LOT API connector	Site ↔ device contract	**Implemented + tested**
04	Firmware	ESP32-S3 architecture, scaffold in `hardware/firmware/lot-pager`	v0.1 scaffold
05	Companion software	Simulator/CLI, e2e test	Working
06	Manufacturing, 100 units	PCBWay, steel body, test jig, compliance	Plan
07	User manual	What ships in the box	Draft
08	Decisions R1–R3	Thickness, charging through steel, RF	**Waiting on Vadik**
—	Session reports	One compressed report per session	S3

CODE IN THIS REPO

- `src/server/models/device.ts`, `migrations/20261111120000_create-devices.cjs` — paired devices (token hash only)
- `src/server/routes/device-api.ts` — `/api/devices*` (user) and `/api/device/*` (device)
- `src/client/components/Logs.tsx` — `device_copy` renders as `PAGER:` in the Log tab
- `hardware/firmware/lot-pager/` — firmware v0.1 (PlatformIO, Arduino-ESP32)
- `hardware/tools/lot-pager-sim.mjs` — device simulator / companion CLI
- `hardware/tools/device-api-e2e.mjs` — 23-check end-to-end test (real Postgres)
- `hardware/tools/build-pdfs.mjs` — regenerates `pdf/` from these Markdown files

NOT REACHABLE FROM THE BUILD SESSIONS

lot-systems.com, brand.lot-systems.com and institute.lot-systems.com are blocked by the session network policy (proxy 403). Brand language here comes from the repo only. Add those hosts to the environment's allowlist so a session can read them.
