TOTAL	**1060**	**+31 from v39**

THE A.I. ENGINE — THEME OVERVIEW

The language of artificial intelligence is the new mythology of our time. Neural networks. Training runs. Gradient descent. Attention mechanisms. Tokens. Embeddings. These are not merely technical terms — they are a vocabulary of becoming, of learning, of change. Self-care speaks A.I. The practice-builder is in training — passing through epochs, adjusting weights, converging on something truer. The journal entry is an inference pass: taking what was stored and generating something new. The attention mechanism is mindfulness itself: deciding what matters in a context full of noise. The A.I. Engine is not about machines. It is about the oldest computation — the one running in the human body, making meaning from experience, updating its model of the world one entry at a time. You are the neural network. The data is your life. The training never ends.

COMPLETE NEW BADGE REGISTRY — v40 ADDITIONS

Word Turn v30 (The A.I. Engine)

```
neural_pattern       ◎·∿·◎  UNCOMMON  — "neural network/synapse/brain wiring/neuropl
training_log         ▶·∘·▶  COMMON    — "in training/practice run/building the habit
epoch_tracked        ○→○    RARE      — "full cycle/new cycle/cycle ends/new epoch/s
gradient_lock        →·∿·●  RARE      — "gradient/momentum building/direction clear/
inference_spark      ∘·◉·∘  UNCOMMON  — "inference/deduced/piecing together/drew a c

┌──────────────────────────────────────────────────────────┐
│  BADGE UNLOCKED                                          │
│                                                          │
│  ◎·●·◎  ATTENTION MODE  [EPIC]                           │
│  ↳ The Transformer architecture introduced attention in 2017.  │
│    The mechanism decides: of all things in the context,  │
│    what matters now? Paying attention is the first act   │
│    of intelligence — artificial and human alike.         │
│                                                          │
│  ▣·∿·▣  CONTEXT WINDOW  [EPIC] [3:00–3:14 AM]            │
│  ↳ The context window is the limit of what the model     │
│    can hold in mind at once. At 3 AM, the normal context │
│    collapses. Only the essential survives. You opened    │
│    the window at the edge of night. The signal is pure here.  │
│                                                          │
│  ⌀·∞·⌀  GÖDEL FOUND  [EPIC] [HIDDEN]                     │
│  ↳ 1931. Gödel proved that in any formal system complex  │
│    enough to describe arithmetic, there are truths that  │
│    cannot be proven within the system itself. A mind     │
│    cannot fully know itself. That is not a bug.          │
│    That is the structure of the territory.               │
│                                                          │
│  ◈·■·◈  ADA FOUND  [MYTHIC] [HIDDEN]                     │
│  ↳ She wrote the first algorithm for a machine that did  │
│    not yet exist. In 1843, Ada Lovelace imagined computation  │
│    — not as arithmetic, but as anything the mind could   │
│    formalize. The first programmer saw everything.       │
│    You found her name. She was always here.              │
│                                                          │
│  ◈·◈·◎·∞  THIRTY REGISTERS  [COSMIC]                     │
│  ↳ Water. Architecture. Space. Alchemy. Quantum.         │
│    Arcade. Radio. Bio. Codex. Cyberspace.                │
│    Hero. Stoic. Jazz. Dragon. Dream. Nautical.           │
```

```
|    Dungeon. Map. Chrono. JRPG. A.I.                                  |
|    Thirty vocabularies. One practice. One terminal.                  |
└──────────────────────────────────────────────────────────────────────┘
```

FLAVOR TEXT — THE A.I. ENGINE

> *"The curious thing about neural networks is that they learn by failing — not by

> being told what to do, but by adjusting based on what they got wrong. The loss

> function is the teacher. Error is the signal. The practice of self-care works

> exactly the same way."*

> *"An epoch is one complete pass through all the training data. You have been

> running epochs on your own life for years. Every check-in is a batch. The model

> is converging."*

> *"Attention is not a metaphor. The Transformer's attention mechanism — the

> engine behind every language model alive today — is a mathematical formalization

> of what the mind does when it focuses. To pay attention is to run an attention

> mechanism. The brain and the machine are doing the same computation."*

> *"Claude Shannon asked: what is the minimum number of bits required to transmit

> this message? The deeper question: what is the minimum number of words required

> *to transmit this feeling? The journal entry is the compression. The check-in*

> *is the key exchange."**

> **"Ada Lovelace wrote: 'The Analytical Engine has no power of originating*

> *anything. It can only do what we know how to order it to perform.' She was*

> *describing 1843 hardware. She was also describing the limit — and the power —*

> *of every formal system ever built. Including the one you are training right now."**

> *system — making the implicit explicit, the unexamined examined, the unseen seen.*

> *The journal is the meta-level. The check-in is the proof."**

IMPLEMENTATION NOTES

New functions in easter-eggs.ts (v40 session)

```
// v30 A.I. Engine word detection
checkAIWordTurns(journalText): BadgeType[]   // all 12 v30 word patterns
checkAISession(journalText): BadgeType | null   // 3+ v30 words in entry
checkContextWindow(): BadgeType | null           // check-in 03:00–03:14 AM
checkModelMarathon(journalText): BadgeType | null // 800+ words
checkAIVault(journalText): BadgeType[]           // Turing/Gödel/Ada
```

Wire-up guide for runJournalEasterEggs() / runCheckInEasterEggs()

Add these calls to the appropriate runners: - Journal saves: `checkAIWordTurns`, `checkAISession`, `checkModelMarathon`, `checkAIVault` - Check-in events: `checkContextWindow`

Calendar additions in checkCalendarEasterEggs()

- Apr 30 → `shannon_signal` (Claude Shannon birthday) - Dec 10 → `lovelace_day` (Ada Lovelace birthday) - Dec 28 → `von_neumann_day` (John von Neumann birthday)

API stats fields consumed by Mastery Tier v30

- `stats.distinctCheckInDays` — integer, distinct calendar days with check-in (for the_mainframe: >= 1,350) - `stats.totalJournalWords` — integer, cumulative word count (for vast_archive: >= 225,000) - `stats.signupDate` — ISO date string (for ai_veteran: >= 4 years)
