THE CLOCKWORK HEART — THEME OVERVIEW

A watch is not merely a timepiece — it is a theorem. Every gear, every jewel, every hairspring is an argument about the nature of regularity, of precision, of care. The watchmaker's paradox asks: who wound the first spring? The self-care answer: you did. Every day you do.

Horology — the science and art of measuring time — is the oldest precision discipline. To be a watchmaker is to understand that everything depends on everything else: one gear off by a fraction of a millimeter, and the movement stops. The self-care practice works the same way. Regularity is load-bearing.

The parallel between watchmaking vocabulary and serious practice is exact:
- Calibration: bringing measurement into agreement with truth
- Escapement: the part that controls the release of energy — one measured tick at a time
- Mainspring: the coiled energy source that drives everything
- Perpetual motion: the asymptote every practice approaches

These are not metaphors. They are structural descriptions of what serious practice-building actually requires.

FLAVOR TEXT — THE CLOCKWORK HEART

"You never actually own a Patek Philippe. You merely look after it for the next generation." — Patek Philippe house motto. The practice you build is not yours alone — it is a mechanism you pass forward.

"The tourbillon was invented by Abraham-Louis Breguet in 1801 to compensate for the effects of gravity on a pocket watch's accuracy. He spent years solving a problem most people could not even articulate." The practice of self-knowledge works the same way. You are building compensations for forces you are still learning to name.

"A clock is a machine. A watch is a person." — George Daniels, master watchmaker. Every practice builds both: the reliability of the machine and the intention of the person.

"The most complicated wristwatch in existence has 1,728 parts. The watchmaker who built it worked alone, by hand, for years." Complexity is not the goal — regularity is. But regularity, built carefully, produces astonishing complexity over time.

"Longitude was the great unsolved problem of the Age of Exploration. John Harrison, a carpenter by trade, solved it in 1759 with a watch. The experts said the problem required an astronomical solution. Harrison said it required a precise clock. He was right." The unconventional solution, rigorously executed, always wins.

IMPLEMENTATION NOTES

New functions in easter-eggs.ts (v38 session)

```
// v29 Clockwork Heart behavioral

Wire-up guide for runJournalEasterEggs()

Add to journal save runners:

- `checkClockworkSession(journalText)` — behavioral
- `checkClockworkHeartWordTurns(journalText)` — word turns + secret boss

Add to check-in runners:

- `checkPrecisionHour()` — precision_hour behavioral

API stats fields consumed by Mastery Tier v29

- `stats.distinctCheckInDays` — integer (for thousand_days_clock: >= 1,500)
- `stats.totalJournalWords` — integer (for grand_complication: >= 500,000)
- `stats.signupDate` — ISO date string (for perpetual_calendar: >= 12 years)
