LOT COMPUTER ��? HOST-SOFTWARE

LOT COMPUTER — Host Software (`lotctl`)

```
DOCUMENT   LOT-COMPUTER / 05 HOST SOFTWARE   REV A   2026-10-11
S-2        VADIK MARMELADOV
STATUS     SPEC — not written
```

Purpose

One cross-platform command line tool (Node/TypeScript, matches the repo, or Python) to connect a computer to the firmware.

Commands

Command	Does
`lotctl flash <fw.bin>`	flash via `esptool` over USB
`lotctl provision --wifi SSID --pair CODE`	writes Wi-Fi + pairing code, device exchanges for token
`lotctl monitor`	serial console, secrets redacted
`lotctl ota <fw.bin>`	push signed image
`lotctl test`	end-of-line test: sensors, display, button, Qi, camera LED
`lotctl label`	prints serial / QR for the 100-unit run
`lotctl export-log`	dumps offline queue

Factory flow (100 units)

flash → EOL test → provision serial → record result CSV → label → pack. Test results kept per serial so a return maps to a build.

Notes

Depends on firmware serial protocol (JSON lines) defined at M1. Signing keys are held off-device and never committed.
